PALIGEN™
TECHNOLOGIES

Bringing Industry Back to U.S. Soil

We provide advanced chemical manufacturing plants across the United States, from the initial design through long-term operations. We will continue to revitalize the industrial base with the development of the first U.S. domestic TNT facility in the United States since the 1980s.

Through these solutions, we build modern chemical production capacity, strengthen our nation's supply of critical munitions, and restore critical manufacturing capability across the country.

Cutting-Edge Research & Development

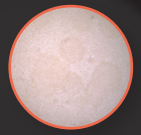

Our team's deep industrial knowledge advances the synthesis, production, and mixing of energetic materials and propellants through advanced technologies and modernized practices.

TURN-KEY CHEMICAL PLANT CAPABILITIES

Paligen Chemical's facilities incorporate technologies capable of delivering a variety of explosive materials and mixtures, including explosive powders (PETN, RDX, and HMX), castable products (TNT, Comp. B, and IMX-104), and other castable and moldable CXM/PBX materials.
